

1:53:36

session and I believe and I hope meron po pa tayong mga storage sa ating mga

1:53:43

mind no na makinig sa ating of course the next session po ng ating webinar

1:53:50

ngayon no which is the cyber hygiene no smart habits for uh digital safety 50.

1:54:02

Okay po. Um, without further ado, let's begin. No, the our of course our next

1:54:08

session. Um, hindi naman po ito malayo sa ating um previous no na na session.

1:54:16

It's about building our digital skills, no? And this time, um, it's all about

1:54:24

safety na naman pagdating natin sa ah digital, no? Kasi sa ngayon na panahon,

1:54:31

we are living in two worlds. Of course, we are living in a physical world, no?

1:54:38

Of course, the physical, the reality and of course the

1:54:42

world, no? And, and ayan. If we no sa physical um aim natin is maging good

1:54:50

citizen talaga no sa sa ganitong mundo. Same din po sa cyber kumbaga sa cyber

1:54:58

world we are aiming for good citizen and of course um we believe that

1:55:07

uh good citizen starts with awareness so that's why no isa sa mga function ni

1:55:15

dito sa Pilipinas is to aware Filipinos no in the aspect of cyb security

1:55:24

So ayan po. So so dito po when we talk about cyber hygiene ito po talaga yung

1:55:31

lalabas no sa ating kumbaga ito yung lalabas sa ating mind no. So makita po

1:55:40

ba yung presentation ko? Yan po. Nakasunod lang po ba yung lahat? Thumbs

1:55:44

up naman po sa nakasunod lang. Ah ayan ayan thank you po. So dito daw

1:55:56

pagdating daw sa cyber hygiene or kumbaga sa word na hygiene ano um totoo

1:56:04

po ba ito? If you agree or not comment lang po

1:56:11

no. Sabi daw dito yung voice room messy daw. Pero pagdating sa desktop ng mga

1:56:17

boys, napaka umis

1:56:21

no. Pero vice versa sa mga girls, opposite daw.

1:56:27

Um syempre malinis yung mga rooms ng girls and um pero pagdating sa desktop

1:56:35

maraming files. Ayun po

1:56:39

50% true may false. Yes po. Um syempre depende po naman no sa tao. Sige po. Um

1:56:48

so of course no uh since we are talking about hygiene um

1:56:54

can you give me examples of proper hygiene?

1:56:58

Um comment lang po tayo sa comment box if meron po tayong nalaman. Of course

1:57:04

meron naman po no kung yung mga proper hygiene natin.

1:57:10

Yun po. Brush your teeth of course. Ayan maligo.

1:57:15

Okay. Nakaligo na ba ang lahat? Take a bat. Okay. Okay po. Ito po yung

1:57:22

mga ano natin no mga examples ng mga um proper hygiene. Of course in physical

1:57:29

world. Ito po yung mga examples. Okay po.

1:57:37

Ayan. Bathing regularly. Ah washing hands

1:57:42

and of course brushing teeth. Ayan po yung mga proper hygiene natin no na

1:57:48

ginagawa everyday. Yan po. And next ano po yung mga ibang

1:57:55

proper hygiene ah visiting dentist regularly. Yan po kaway-kaway sa mga

1:58:01

nagv-visit ng mga dentist regularly and of course ah sa mga boys regular haircut

1:58:09

and cleaning your room regularly. Ayan.

1:58:16

So yan po no since it's a hygiene no um of course um

1:58:25

in the word hygiene um we are aiming talaga ng proper hygiene ano same as

1:58:33

well sa cyber world so we are aiming of course for proper hygiene that's why

1:58:41

meron tayong um cyber hygiene in smart habits for digital safety. So ayun po

1:58:49

intro ko lang po yun JZ. Okay. Um so no this time um let me

1:58:58

share to you um some information about cyber hygiene. Of course this is a an

1:59:05

information session so kumbaga tapos na tayo sa mga activities. So I hope you

1:59:11

will lend me your ears no. Okay po. Um, cyber hygiene. So first no, let's dig

1:59:18

deeper sa mga datas uh globally no around the world kasi of course bigyan

1:59:26

na natin ng para mabigyan na natin ng importance no ang cyber hygiene um

1:59:34

tingnan muna natin yung data on how digital are we. Okay po. So dito na

1:59:41

slide no um ito po yung datas natin around the

1:59:46

world. Of course this is from a reliable source. Mase-search lang po ninyo ito

1:59:52

online. This is free no? As of now daw we are already

2:00:00

in 8.25 25 billion total population sabi daw dito and of course mga unique mobile

2:00:09

phone subscribers 5.78 78 billion and ito po highlight ko lang na we are

2:00:18

already individuals using the internet no aabot

2:00:22

na pala ng 6.04 billion. So it's more than half of the

2:00:29

world's population. Um it's already 73% of the world's population

2:00:36

no and sa mga social media users identities

2:00:41

um 68.7 no billion. So it shows dito na data

2:00:47

that we are already no halos lahat na ng mga ah tao already connected na daw sa

2:00:54

internet. So next po tingnan po natin yun. Let's dig deeper no. The internet

2:00:59

use over time no or the timeline of the internet use no. So dito makikita natin

2:01:06

yung graph is pataas na pataas po talaga no. Kumbaga I believe hindi na ito

2:01:13

bababa as the years go by no we are already on 6.04

2:01:20

billion. Okay po. Yung world's largest connected

2:01:26

population. Saan po ba dito ang Pilipinas?

2:01:32

Ah yun po number 12 no. We are already on 98 million users connected online.

2:01:41

Yes po. Digital era na po talaga tayo no. So of course tingnan natin yung

2:01:46

weekly time spent natin in consuming online media. Sabi daw dito worldwide

2:01:53

daw na average is 33 hours every week.

2:01:59

So ganun po ang data. So kung i-breakdown natin, ang daily time spent

2:02:05

using the internet daw is ah of course this is worldwide no na data. Um it's

2:02:12

already on everyday daw mag-spend tayo ng 6

2:02:18

hours and 37 minutes daily no? Daily time spent. Pero kung makikita natin

2:02:24

dito, saan ba yung Pinas? No, I think nandito tayo sa

2:02:31

O po kung makikita niyo sa aking screen. Ayan.

2:02:37

Oops. Oops. I'm sorry. Ayan. Okay. Daily time spent po using the

2:02:45

internet. Ayan. Parang delay 'yung slides ko 'no?

2:02:52

Okay po. Next tayo 'no' sa mga uh datas around the world no'p

2:02:58

na of course connected sa Pilipinas ah I mean connected no sa internet um

2:03:05

97% daw ng mga internet users are using mobile phones. Ayun. And of course, ang

2:03:14

main reason po natin no sa pagvivisit daw ng um ng internet, one of the main

2:03:21

reasons po talaga is finding information that it's based on the datas no in the

2:03:29

statistics. Okay po. So kumbaga nakita natin dito

2:03:35

non na we are talagang nandito na talaga tayo sa digital era.

2:03:43

And of course mga top ah types of website no na vini-visit natin. Number

2:03:49

one talaga diyan is yung chat and messaging. course kasi mahilig talaga

2:03:54

tayo no mag kihaloo share connections ganyan po ayan

2:04:03

of course the top websites no na vini-visit natin um this is based on the

2:04:09

ranking no so makikita natin dito number one talaga si Google and

2:04:17

of course the YouTube um kumbaga puro messaging app po lahat no ang nagtatapo

2:04:23

talaga. So may nagtanong, "What is X.com?" Ang

2:04:28

si X.com po is yun po yung Twitter, no? That's the Twitter. Um

2:04:37

as of now, narama siya ni Elon Musk na X. Okay po. So ayan. Of course, hindi

2:04:44

lang po sa social media no ang kumbaga nag-e-evolve tayo digitally of course ah

2:04:53

kasali na rin no sa sa ating pagsho-shopping

2:04:57

the e-commerce no. Ito po daw ang sabi na um 50% of the internet population no

2:05:06

or above 50% daw is already ah nagsho-shopping na online no. So

2:05:13

kaway-kaway diyan sa mga nag ah shopping online. And of course no meron tayong

2:05:20

mga um buy now and pay later services. So marami na.

2:05:27

Soan ang influence no digitalization.

2:05:33

Okay. And of course this is the ano the global data. And since we are on the

2:05:43

Philippines, no, it's good that we talk about our nation kung gaano na po ba

2:05:48

tayo kaigital ang Pilipinas.

2:05:53

Okay. So let's have a quick look no sa mga datas around our nation no. So the

2:06:00

Philippines as of now uh the total population is 117

2:06:05

million. Okay. Um yan po yung ano natin no information. And dito highlight natin

2:06:13

that individuals using the internet are already 98 million. So that's 83% no of

2:06:22

the population. So makikita natin um grabe na na talaga

2:06:31

no ka-digital din po yung Pilipinas and 95.8 million mga social media users.

2:06:42

And sa dito no next slide

2:06:48

um that the Filipinos spend almost 9 hours daw daily. So totoo

2:06:56

po ba ito? Ayan. Um, of courseend natin na internet

2:07:04

on the mobile phones 5 hours. So no studies says that

2:07:12

Pinois daw remain number one internet users globally says the digital 2025

2:07:20

report no so makikita natin ah ganun na po ba ganun na talaga tayo

2:07:25

ka-digitalize no? It says na 8 hours daw tayo gumagamit or sobra and the global

2:07:33

average is ah 6 hours lang. So diyan pa tayo number one. Okay po.

2:07:43

Of course uh need din natin to sa work no the digital no.

2:07:48

And Pilipinas

2:07:55

is one of the top five targets po ng global

2:08:01

cyber criminals. That's why no na isa po talagang

2:08:06

nag-re-raise ng risk no as we of course magspend tayo online no.

2:08:14

Isa talaga ang hindi mawawala na risk is the cyber threats no online and sabi daw

2:08:22

dito sa studies no na trend micro na we are one of the

2:08:30

ano talaga target ng mga cyber criminals.

2:08:34

Ayan po. So that's why no it leads us to this question po no. Uh of course it's

2:08:42

important to know the datas 'no. Uh it's because just to raise our awareness.

2:08:48

So kung tatanungin po ba kayo uh where is your data? Saan po ba 'yung mga data

2:08:54

natin? No so imagine this no? Baka naexperience niyo po ito. No of course

2:09:01

uh this is a just an example um situation.

2:09:06

Only yesterday you shared a couple of photos no of your first day on the job

2:09:12

with a few of your close friends and that got you thinking na that should

2:09:20

be okay right no? So let's see. Tingnan natin kung okay lang po ba ito.

2:09:27

Okay. And of course you took some photos on your

2:09:32

mobile phones. So meron na tayong copies no ng mga photos available on our mobile

2:09:39

devices. Ayan and uh maybe you shared this with ano no

2:09:46

five close friends who live in various locations across across the world. Oops.

2:09:54

Ayan across the world. And um

2:10:00

what if all of your friends downloaded the photos and now have copies of uh

2:10:05

photos on their devices? No. And one of your friends no was so proud

2:10:13

that they decided to post and share your photos online. And the photos are no

2:10:19

longer no just on your device. They have in fact ended up on servers located in

2:10:26

different parts of the world and of course na-save na ng mga ibang devices.

2:10:32

No, that's um of course a curious ano no na data. So kumbaga sinasabi dito na

2:10:41

yung data natin hindi lang po pala na mase-save lang sa ating device no.

2:10:48

Um possible din po na ibang hawak ng datain. So why is it so important? No

2:10:58

sabi daw ni Clive Humby nung ah 2006 sabi daw niya ah data is the new oil. So

2:11:09

speaking of oil ma ah taas na po ng ano ng gas.

2:11:16

Okay po. So data is the new oil. Of course, no. In the business world, data

2:11:23

is the most powerful. That's why maraming mga customers mga ang mga big

2:11:29

businesses around the world because they hold big data. So ganun po ka ah

2:11:37

importante yung mga data natin. So ah sinasabi daw dito na hindi basta-basta

2:11:43

yung mga datas natin no'. Okay. So tingnan natin kung ano na ba

2:11:49

ang nangyayari na around the cyberspace. Um

2:11:55

no of course um kailangan din natin ong malalaman no to raise our awareness on

2:12:02

what's going on no uh para makita natin ang importance ng practicing our cyber

2:12:09

hygiene later on. So ayan po makikita natin dito na

2:12:16

this is the mga incidents no past incidents around the world ah mga data

2:12:22

breach everywhere. Sabi daw dito data of 22.5 million

2:12:28

Malaysians born on uh 1940 2004 allegedly being sold for US um 10k US.

2:12:38

So gan po kamahal yung data no. Same lang din po ng oil. Okay. And isang

2:12:48

incident din po yung pulse mabuhay suffers a data breach. So they are data

2:12:53

breach everywhere no um in the cyber realm happening. And of course merong

2:13:00

mga ransomware attack. Ah isang example niyan yung Costa Rica state of

2:13:06

um um the Costa Rica state no ah yung mga cyber hackers daw nag uh

2:13:15

nagra-ransom nitong

2:13:19

dito sa Costa Rica. Ah of course maraming nadamay no sa mga ganyang

2:13:24

incident. Ayan. And of course uh kasali na rin dito no. Hindi po pala exempted

2:13:33

ang mga critical sector or mga malalaking sector no around the world.

2:13:39

Um hindi sila exempted pagdating sa cyber attacks no because

2:13:46

kasi once you connect to the internet you are already vulnerable to cyber

2:13:51

attacks and that's the reality. uh whether you are ano no whether you are a

2:13:56

professional or not or whether you are old or young um we are vulnerable talaga

2:14:03

po sa mga cyber attacks. Okay po hindi exempted yung mga

2:14:09

mga malalaking sector. Ayan, meron tayo dito. Um, ito mga malalaking sectors no,

2:14:17

mga data breaches and mga um vulnerable din po sa mga attacks.

2:14:25

Ayan. And dito din po may mga ano no mga mga data bridge no of course

2:14:34

mga cases din dito sa Philippines no. uh 55 million na mga uh data or mga

2:14:45

databases at risk no at the commct and that's ano no it's triggering or

2:14:51

alarming na mga data and of course meron din pong mga banks nara-rub

2:15:00

virtually no example dito ito yung hackers hit the

2:15:05

ucpb with 167 million 'Yun cyber. Ah itong case na daw ah itong case po daw

2:15:14

is parang isang pelikula if you are familiar no sa mga famous na mga movies

2:15:20

about cyber hackers mga ganyan. Ito din po daw ang ma-consider nilang parang

2:15:27

cinematic na na nangyari kasi merong mga hackers and of course they experience

2:15:33

cyber and physical attacks. Ganyan din po. Of course isa din dito merong mga

2:15:40

attacks on banks. Ah yan merong parang merong titan diyan sa

2:15:47

sa image na yan. So anyways, isa din yan no sa mga cases um maraming

2:15:55

mga cases na mga bank attacks no. Uh basically it says to us na lahat po tayo

2:16:02

talaga is very vulnerable no that's why it leads us no uh to this um um truth no

2:16:13

that studies shows uh yun po no yung lahat ng mga cases or most of the cases

2:16:20

ng mga cyber attacks nag-succeed daw sila due to human behavior rather other

2:16:28

than advanced hacking techniques. So again, no, lahat daw ng mga cyber

2:16:35

attacks or most of the cyber attacks is due to human behavior kumbaga is due to

2:16:42

human errors rather than the advanced hacking techniques. Ah that's why it

2:16:48

leads uh it says no na we are um we are only

2:16:54

as strong as our weakest link. Yan po. And of course, the weakest link

2:16:59

pagdating sa cyber world is us, no, the humans. That's why um si no

2:17:07

nagpo-promote talaga ng um cyber awareness pagdating dito. It's because

2:17:15

um it's one of our responsible, no, to make our digital ecosystem safe course

2:17:22

um trustworthy and secure. Ayan. That's why it's it leads us no ah to our best

2:17:32

practices no ng cyber ah cyber hygiene. Ayan po. So ano po ba iyung cyber

2:17:40

hygiene? Of course cyber hygiene is is a set of practices no um that uh

2:17:46

organizations and individuals follow to maintain the health of their devices and

2:17:51

system and protect their personal data. Ayan po na that's why um importante po

2:17:59

talaga itong mga cyber hygiene natin. Okay po. So let's explore no since we

2:18:07

already know no kung looking back sa mga big data na ating na-gather and of

2:18:12

course na mga cyber cases no around the world. One of the main reasons pala is

2:18:20

of uh is the human error no instead of advance hacking

2:18:28

um resulta daw ng mga human errors. That's why ang response natin diyan no

2:18:35

na mga incidents para ma-prevent natin yung mga ah big damages is the cyber

2:18:42

hygiene. So ayan. Ito po yung mga ano no mga top problems natin pagdating sa

2:18:50

cyber hygiene. Of course uh hindi marami pa tayong list nito. I have just listed

2:18:56

here the top four. Ayan no. Of course mga problem daw natin the security

2:19:04

breach. Ah that's because um kapag hindi tayo magpa-practice ng cyber hygiene

2:19:10

that's one of our risk no? Number one talaga na risk yan. And of course the

2:19:15

data loss no if we don't practice the cyber hygiene. Later on mame-mention

2:19:20

natin i update kasi po ang virus po na um that is rampant online is

2:19:26

mga outdated software. That's why no lahat ng ating mga devices

2:19:33

ah pinipilit po tayo na mag-update palagi ng ating mga systems no whether

2:19:39

it's on a mobile device laptops and of course marami pang mga devices na need

2:19:46

natin i update kasi po ang virus po na um that is rampant online is

2:19:55

continuously upgrading no or updating That's why tayo din po ang ang mga

2:20:02

security natin need din i update. So ayan and of course na older security

2:20:11

software. Ayan po yung mga cyber um problems natin no. And of course if we

2:20:18

practice the cyber hygiene no ito po yung resulta it protects us from

2:20:24

business data of course the information online. And ayan kung gaano po din tayo

2:20:31

nagpa-practice ng cyber ah ah kumbaga kung gaano tayo magpa-practice ng proper

2:20:37

hygiene in the reality. Um kung mag-practice din po tayo ng cyber

2:20:43

hygiene no sa cyber world um good po yung result. Ayan po no. Kasi sabi daw

2:20:50

dito na practicing cyber hygiene can help prevent up to half of common cyber

2:20:58

incidents. Of course that is based on cyber

2:21:02

security and infrastructure security agency. No so imagine um magpa-practice

2:21:10

lang tayo ng cyber hygiene. It can uh it can protect us or prevent up to half of

2:21:17

the common cyber incidents. around the world. So that's why it's very useful no

2:21:23

to know uh this thing and of course to protect us from attackers. Ayan po. So,

2:21:36

okay. Next po tayo. Um, ito po 'yung mga best practices no ng

2:21:44

cyber hygiene for individuals. Of course, a um

2:21:50

ito po yung mga map-a-practice natin no na mga cyber

2:21:55

hygiene. Okay po kasi cyb security is everyone's responsibility which means

2:22:01

that while organizations need to prioritize cyber hygiene so must

2:22:06

individual users. So later on po no meron po tayong mga cyber hygiene naman

2:22:12

pagdating sa ating mga organizations. So we must start of course on the

2:22:18

individuals no and or the individual users.

2:22:23

Okay po. So ito po yung mga best practices no ng

2:22:30

cyber hygiene for individuals. And of course I have

2:22:36

uh listed this no it's because ito po yung mga top reasons uh that's why

2:22:46

cyber attacks or mga data breaches. Okay po. So dito po no

2:22:52

we have to back up our data regularly no kasi

2:23:00

um we don't know baka ma mawala yung data natin ano if if isa po isa lang po

2:23:08

yung data natin for example yung mga importanteng files sa isang storage lang

2:23:14

po naka-save hindi po tayo ma-assured na um na baka mawala iyung data. What if ah

2:23:22

something happens no na sa mga devices? So later on makikita natin yung best

2:23:30

practice or isang ah pina-practice ng ah dito sa DICT no. Ayan. And of course use

2:23:39

data encryption. Ano po ba ito ang data encryption? Um, pinaka-basic po natin na

2:23:45

magagawa dito no sa data encryption is to is by zipping our files no when

2:23:52

sharing. That's one of the ano no basic data encryption. Ano po ba yung

2:23:59

pagzi-zip ng data? Okay po sa pagzi-zip po ng data or ng

2:24:06

a file no makikita natin yan sa of course that is available

2:24:13

on most of the devices no. Um, ang free natin na ginagamit is yung 7 zip, no?

2:24:21

And that's a one way, a good practice, no? A good um practice, cyber practices

2:24:31

when sharing our data kasi um malalagyan din natin ng passwords and ma-encrypty

2:24:39

yung data. Ayan po. And of course, we set up no ang ating firewall. Ayan po

2:24:49

kasi yung firewall nagpo-provide ng protection po no especially on networks.

2:24:55

Kasi kapag naka-on yung firewall natin, mab-block niya yung mga attackers no in

2:25:04

of course in cyber maba-block niya yung mga hackers trying to

2:25:10

um trying to get our data. Of course no, if uh hindi lang 'yan sa pagpo-protect

2:25:17

din po no'no um 'yung firewall nagfa-function din as a kumbaga

2:25:23

nagastore din siya ng um for example na inflict na yung system natin or yung

2:25:30

devices natin ng virus. So isa din po sa ginagawa ng firewall is hindi po siya

2:25:37

nag kumbaga hindi niya ina-allow yung mga data na ma-spread no. So that's isa

2:25:45

din po yan sa ginagawa ng firewall. That's why it's very important.

2:25:50

Okay po. And isang practices din po no of course na na-promote namin is to

2:25:57

educate ourselves no pagdating um sa mga cyber threats. Isa din po yan

2:26:04

no yung mga fishing attacks. Um learn to recognize no the

2:26:12

um suspicious emails. Of course, I know naka-encounter na kayo niyan no mga

2:26:19

suspicious emails, um, mga fishing links and

2:26:25

any ano pa na mga cyber attackers, no? To get our data or personal information.

2:26:35

Ayan po. So and next po is to update your software. Of course this is

2:26:44

important po kasi sabi ng iba ah kumbaga yung iba kasi matatakot daw sila

2:26:52

mag-update ng kanilang mga system or devices. Baka kasi um mag-log daw. Um

2:26:59

pero one of the recommendation po talaga no if you are if you have devices

2:27:06

maganda po talaga na mag-update tayo regularly no if merong mga update of

2:27:11

course that is available naman po sa mga mobile devices and the laptop devices

2:27:20

and it's because kapag mag-update tayo ng mga software um yung mga security

2:27:25

features niya nag update din kasi um yung viruses no ah automatic kasi sila

2:27:34

nag-a-upgrade as time goes by no kasi mabilis din yung mga hackers that's why

2:27:40

pag sa atin po pagdating sa atin ah mabilis din po tayong mag-update ng mga

2:27:47

software natin and of course stay discrete when sharing no be aware of

2:27:54

what personal information you disclose online as cyber criminals could use it

2:28:00

in social engineering attacks to obtain data or money. Of course, no. um always

2:28:07

um verify pagdating po sa sharing. Ayan po.

2:28:14

And isa po din sa pino-promote natin 'no is the password hygiene.

2:28:21

So um familiar po ba kayo sa ah the multifactor authentication? Okay po ba?

2:28:30

Pwede po ba tayo mag-type ng one if you are familiar? And of course type ng two

2:28:35

if hindi po tayo familiar. Ayan. So halos po lahat no familiar na ng

2:28:41

multifactor authentication. So sa mga hindi pa familiar um it's

2:28:46

basically it adds a another layer of security.

2:28:51

No ang multifactor authentication kung bale para ma-identify ng device kung

2:28:58

ikaw po talaga yan um the first layer of um security is the password. If you know

2:29:04

the password then that's the first layer. And of

2:29:08

course kung meron tayong multifactor authentication

2:29:13

isang um layer pa ng ah cyber or isang layer pa ng ano no security

2:29:23

is the multifactor authentication. And of course ah example niyan is yung mga

2:29:28

OTP and mga another authentication apps. Marami din

2:29:35

yan available online no. And ayan po yung

2:29:43

ano multifactor authentication. And of course we must use no good password

2:29:49

hygiene. Sa ngayon um kung sa dati daw ang password po natin

2:29:57

is ah um minimum of eight characters no? Of

2:30:03

course eh ah nakasagol na yan kumbaga mix with um

2:30:11

um special characters. Ayan po. So sa ngayon to maintain a password hygiene,

2:30:20

mas mabuti po na we have a minimum of 12 characters. Yan po no to of course to be

2:30:29

more secure no. Ayan. And sabi dito na next no that we should invest in

2:30:38

reliable security software. Um tanong lang po if meron po ba kayong mga

2:30:47

recommended or ano po ba yung mga good na mga software kumbaga antivirus

2:30:53

software. Yan po gamitin natin yung chat box no sa mga espicially sa mga it diyan.

2:31:01

Ano ba yung Hello ano ba yung mga um kumbaga mga

2:31:10

ah recommended na mga ah

2:31:15

mga antivirus? Okay. Ayan merong mga malware bites. Ayan Casper Kai. Okay.

2:31:22

Casper Sky. Avast. Okay po no? Um,

2:31:28

and of course sa mga ah hindi nag hindi nag-avail niyan na mga software no.

2:31:36

Personally I would recommend no the Windows Defender. It's because built in

2:31:42

na po yan siya no sa mga Windows users. It's um I could say it's enough no. Pero

2:31:48

kung meron kayong mga personalized or mga um nagugustuhan no na mga cyber uh

2:31:55

kumbaga mga antiviruses, mas mabuti din po iyan na ma-explore

2:32:00

natin. Pero sa mga regular users natin na hindi familiar sa mga ganyang um mga

2:32:09

information, enough na po yung built-in no na Windows Defender. Okay po. So

2:32:16

ayan, next po tayo no. Uh we are on the cyber hygiene best practices no sa mga

2:32:21

organization. Ayan po kasi most of the cyber attacks

2:32:27

no naka hindi lang po sila sa mga individuals

2:32:32

nag nag-a-attack pero ah same din po sa mga organizations kasi mas malaki yung

2:32:38

makukuha nila. Yan po. So let's proceed. And um ito po yung mga ano no best

2:32:45

practices pagdating sa organization. Um dapat po if we aim no ng security

2:32:55

pagdating sa ating mga organizations

2:32:59

ah mas mabuti po na meron tayong o po na mga policy no. The password

2:33:05

policy that's first on the least no. Kasi um kasagaran ng mga individuals

2:33:11

ngayon when making password no ah nag create lang sila ng password kumbaga

2:33:20

yung birthdays. Ayan no. That is uh actually um dangerous 'no? If we kung

2:33:29

kumbaga gagamit lang tayo ng password natin, 'yung mga birthdays lang natin

2:33:34

kasi no, what if ako 'yung hacker so madali lang na madali lang ma-hack yung

2:33:41

accounts niyo if ah kumbaga magso-stock lang ako sa inyong mga accounts and of

2:33:47

course ma-hack ko yung mga accounts ninyo kasi um birthday lang yung

2:33:51

password and of course no mga mga basic passwords iwasan po natin yan no we

2:33:57

should implement that policy no sa mga organization of course uh very important

2:34:03

again the hardware and software updates no sa mga organizations na may mga

2:34:09

systems it's better po na mag-update tayo ng ating mga software kasi

2:34:17

para iwas tayo ng mga data breaches ayan p and of

2:34:22

We have the zero trust no the zero trust policies.

2:34:28

Um pagdating po dito sa zero trust policy no sa mga systems

2:34:34

um kumbaga yung mga system natin um mga users no of course the regular

2:34:41

and the non uh regular na mga users we should implement this no the zero trust

2:34:46

policy kumbaga um any user no na mag-access ng mga devices or systems um

2:34:56

i-verify sila palag pagdating

2:34:59

kung mag um kung maglo-login po sila no kasi diyan po isa din po yan na risk no

2:35:07

kasi again most of the cyber attacks happen is because of human errors no

2:35:14

what if may mga unauthorized personnel no na mga mga

2:35:20

nag um kumbaga naglo-login ng mga devices natin so that's why It's good to

2:35:27

implement zero trust policies. Of course, the email security process uh

2:35:33

policy uh ito po yung um policy no na kung sino lang po yung ah sendan or kung

2:35:43

ano po yung mga dapat i-send ng ating email no as organization. For example,

2:35:49

um hindi po pwede na mag-send tayo ng um password no in in an email.

2:36:00

It's because of course ma baka ma data breach po tayo. Yan po yun no. Ayan po.

2:36:07

And of course employ a cyb security framework.

2:36:11

Yan po si N framework po ng cyber security bure isang framework din po yan

2:36:20

no na policy for organizations and it's important no sa mga may

2:36:26

organizations niyan or familiar sa mga ganyang framework it's good that

2:36:32

you know no sa mga ganitong framework um one of the best practices ian of course

2:36:40

as a organization. Okay po? And ito po yung best practices

2:36:46

natin no na pagdating sa mga back pag-backup ng data. Ah meron po tayong

2:36:52

tinatawag na 321 backup strategy uh strategy steps no. Um of course uh three

2:36:59

data copies we must keep at least three data copies no stored in two types of

2:37:06

storage and um one copy no stored in an offsite storage. Ayan po yung of course

2:37:14

pina-practice din namin na policy ah para iwas no ng mga iwas errors and of

2:37:24

course madali lang ma-recover yung mga data.

2:37:27

No, sa mga organizations din i-allow po natin yung mga blacklisting and

2:37:34

allowing no to to have access control. Ayan po of course use encryption.

2:37:43

Same lang din po no sa best practices ng individuals no the data encryption. Okay

2:37:49

po. And ito din po no pagdating sa mga

2:37:55

organizations ah lalo na sa mga organizations no na

2:38:01

merong nagho-hold ng ah kumbaga sila yung nagho-hold ng system or um

2:38:08

kumbaga isang ano no for example nagho-hold ng Facebook Facebook pages

2:38:14

nila. So mas uh pagdating po sa cyber security, mas dapat mas mabigat 'yung uh

2:38:22

pag-take natin 'no ng ah nitong mga hygiene no'no. Of course ah 'yung

2:38:27

password natin hindi madali macompromise and of course meron tayong multifactor

2:38:33

authentication. Ayan po. Yan po yung mga best practices

2:38:38

no. And of course pagdating naman po sa mga networking, ito po 'yung uh list no

2:38:46

ng best practices pagdating sa um networking. Of course, we must have a

2:38:54

VPN no. Ano po ba 'yung VPN? Ang VPN po is a no' a network that is strongly

2:39:02

encrypted and protected to isolate the numerous vulnerable public Wi-Fi system

2:39:08

that opens up a gap for attacks. Kumbaga yung mga VPN po natin, ito po yung mag

2:39:14

isang way po to protect us no from cyber attacks. Ah it's because um iiba maiba

2:39:22

niya yung mga networks natin no. It have a

2:39:28

meron siyang ganyang function no yung VPN. Ayan po. And of course yung mga

2:39:34

endp natin na we must secure no yung mga end points. Ano po ba yung mga end

2:39:39

points natin? Isa dito example no yung mga mobile devices ah kumbaga mga ah

2:39:46

laptops PCs. Yan po yung mga devices na maka-receive ng um network or

2:39:53

maka-receive ng data and maka-send ng data. No, one example

2:39:59

is um iwasan natin no kumbaga magpa-plugin

2:40:07

ng ating mga devices. For example, no sa mga public places no na um public places

2:40:15

na charging ah charging port. Ayan po. Isa din po yan sa mga risk no. because

2:40:23

possible lang din po na maka um na maka-access yung mga hackers

2:40:31

no sa mga ganyan kasi ah meron akong ah kakilala no na nagcha-charge siya ng

2:40:37

kanyang phone sa ah sa bus and pagcha-charge niya ng phone nawala yung

2:40:44

kumbaga na-power off yung device niya and then pag

2:40:49

on namin balik no ng kanyang device meron ng mga ads yung phone niya kahit

2:40:55

na naka-off yung wifi no that's one of the example no ng um kumbaga i-secure

2:41:03

natin yung mga end points natin ah of course no next on the list is the patch

2:41:10

management same lang din po ito sa mga pag-u-update no ng mga software na ating

2:41:15

ginagamit pagdating sa organization is because para ma-lessen yung mga risk

2:41:21

natin. Ayan po. And

2:41:25

of course no um sa mga organization ah mas ah sa mga organization po no mas

2:41:35

ah importante po itong mga security awareness training po natin. And one of

2:41:41

the ano po natin no function ni Dic to promote no itong mga training. So kung

2:41:48

merong mga DICT diyan no sa mga areas ninyo, ito po yung mga one of the

2:41:55

trainings no or kumbaga free services ni DCT. So kanina po no' may nagtanong na

2:42:02

uh safe po ba 'yung uh DIC free wifi? Ayan po no, may nagtanong po kanina ah

2:42:11

kanina um kumbaga sa ganung tanong po no um si DIC free wifi po no of course we

2:42:19

must kumbaga we must acknowledge no na we don't have a absolute protection

2:42:27

no So pagdating po sa DIC free wifi, um avoid lang po tayo na mag

2:42:37

um kumbaga magduno ng financial transactions. It's because

2:42:44

baka merong mga hackers na mga naka-connect. Ayan po. And no, to lessen

2:42:50

the risk no. Mas mabuti na gumamit na lang tayo ng data no. Of

2:42:56

course, for surfing, it's okay naman po. Ah yon po. Yan po yung mga best

2:43:03

practices natin no sa organizations and for the individuals no pagdating sa

2:43:09

cyber hygiene. Ayan po. So I think malapit na po ako matapos. And um ayan

2:43:18

po no ah I want to end this no presentation with of course a quote kasi

2:43:24

mahilig ha. Of course, no. Mahilig tayo sa mga coat no'no. Ayan po. Cyber

2:43:30

threats are everywhere but smart habit habits still beat them. Ayan po no. So I

2:43:39

hope ah marami tayong na ano sa mind no na

2:43:46

information pagdating sa cyber world. Um it's because again no uh we aim for uh

2:43:53

good citizen no not just in real world but of course in the cyber world. That's

2:44:00

why uh it's good na maging ano po tayo maging informed or maging aware po sa

2:44:06

mga ganitong bagay na rarampant online. Okay po. So for

2:44:12

more information po no, if you want to be more awared no pagdating sa

2:44:17

cyberspace meron po tayong mga pages po no si DICT.

2:44:22

Ayan po of course the cyber security no DICT cyber security. Ito po iyung mga

2:44:28

mafa-follow natin no if you if you want no ang ating kumbaga iyung social media

2:44:34

natin mafi-field ng cyber security. Ayan po. And I believe diyan lang po nagtide

2:44:42

ko po. I hope and I believe um we are ano no

2:44:48

informed sa mga ganitong bagay. Okay po. So thank you everyone for your

2:44:54

participation and of course stay safe po no hindi lang sa

2:45:00

reality and of course sa online. Ayan po. So

2:45:06

ibabalik ko na virtual floor at host. Thank you everyone.

2:45:40

Ayun yan ayon. Thank you so much um Sir Drex sa iyong presentation.
